

SYNOPSIS

The motive of the project “**ANDROID TUTORIALS**” is to develop an android application to be used for the learners who are trying to develop an android application. This application is done using Android studio. In this user has to choose the activity to their concern.

First they are able to see the design and working of the project after that they will able to see the source code for that activity. They also able to work with demo for an specific activity.

This project is similar to the one which is available on online but in online we have to use the internet for watching the video. In most of the tutorials available in video type but in this project we are able to see that in our android phone through a mobile application.

Because most of the students are using mobile phones. So, they are able to access this tutorials through application on their smart phones. This is the advantage of this project. The user can save the mobile data. They no need to use mobile data for to viewing or to download the code.

They able to copy the code for free. They no need download the code externally they are able to copy by select and drag.

They will able to see the source code for that specific activity where the user have chosen. It doesn't require any internet connection. It doesn't have an backend software.
